

ABSTRACT OF THE DISCLOSURE

A system and method for preparing imaging data for printing to a requested web service from an application loaded on a user's computing device. The present invention includes an imaging client computer having a web browser for printing from the application to the requested web service, a personal imaging repository associated with a particular user for storing imaging data that is to be accessed by the requested web service, and a capture driver for preparing the imaging data for transfer to the personal imaging repository. The personal imaging repository is an exchange infrastructure between the imaging data and available web services on the Internet.
